

Appendix VI:

CCF-Tencent Rhino-Bird Fund Scholar Reward Program

To further encourage the personal development of outstanding scholars and support in-depth collaboration on innovative research projects, the Rhino-Bird Fund Project Team has established a scholar reward program. To support the personal development of scholars and encourage both sides to conduct better practice and exploration, the program rewards individuals who show academic excellence during the collaboration as well as projects with achievements ready for application and commercialization

The Scholar Reward Program includes the following two types:

Individual rewards:

At the final appraisal meeting of the Fund, scholars will receive academic incentive funds according to their final appraisal results after the question-and-answer session. Scholars who do not pass the session will not receive rewards.

Project rewards:

By applying for continuing collaborative projects, young scholars have the opportunity to receive continued funding to support project cooperation.

Continued cooperation is a two-way choice made by the R&D team and the scholar. After negotiation, both parties determine the research content and the funding. The R&D team then submits the application to the project team. The project team provides funding for up to 5 projects according to the research content and the final scholar ranking.

The details of the Scholar Reward Program are subject to the program implementation plan issued by the project team.
